 **IBM** WATSON  
on Jeopardy!

# Let's go, humans.

Today the IBM computer Watson begins a three-day contest against Ken Jennings and Brad Rutter, two of the most successful human champions of the TV quiz show *Jeopardy!*

The game poses an extraordinarily difficult set of problems for computer science. *Jeopardy!* clues and the categories themselves are filled with puns, irony, complexity, ambiguity, double meaning—challenging for humans, confounding for computers.

It is a very human kind of data. And it is the kind of data that computers are increasingly being asked to handle. Every day, the world creates more than 2.5 exabytes of new data, and more than half comes not in neat database language but in *natural language*, the language of everyday life and business—e-mails, tweets, IMs, journals, blogs. This highly informal content is shot through with the very kind of complex, contextual language showcased on *Jeopardy!*

Human competitors on *Jeopardy!* grasp natural language clues intuitively and with astonishing speed. Watson, at first, took up to 2 hours to answer a single *Jeopardy!* question—a formula for desperately boring television. To close the gap, IBM scientists developed more than 450 algorithmic techniques. Moreover, Watson's errors in analysis were reduced using IBM DB2® database software in the development phase, and its speed was boosted by a massively parallel computing platform built on POWER7 Systems™—not exotic, one-of-a-kind computers, but the high-performance computers IBM clients use.

Watson's three days of televised fame will soon fade. But no matter who wins the challenge on TV, humankind will triumph in the end. Already, we are exploring ways to apply Watson's remarkable technological intelligence to the most pressing human challenges—in medicine and law, academia and business. Watson is a tool designed to help serve our needs, extend our ambitions and, ultimately, make our lives and our society smarter. Let's build a smarter planet. [ibmwatson.com](http://ibmwatson.com)

**Watson vs the *Jeopardy!* champions, February 14–16.**

# This is Watson

Follow the story of the development of Watson from a modest DeepQA machine to a formidable *Jeopardy!* contestant. Watch the videos below to see how Watson represents a leap forward in data analytics and how this technology will impact business and industry.

## The Next Grand Challenge

IBM and its history of scientific breakthroughs can be credited to a commitment to research and Grand Challenges. Find out how these challenges help push science in ways that weren't thought possible. [Watch >](#)

## Why Jeopardy!?

The IBM *Jeopardy!* Challenge is more than a game. *Jeopardy!* makes great demands on its players—and even greater demands on a computer system. Learn about the unique hurdles *Jeopardy!* presents that Watson must overcome in order to achieve the scientific goals of the project. [Watch >](#)

## A System Designed for Answers

A computer system that can understand natural language and deliver a single, precise answer to a question requires the right combination of hardware and software. Watch to find out how Watson integrates both into a unique solution. [Watch >](#)

## Countdown to Jeopardy!

Watson will soon face the two greatest *Jeopardy!* champions in history: Brad Rutter and Ken Jennings. Watch to find out more about the competitors in this historic challenge. [Watch >](#)

## The Face of Watson

Watson consists of 90 servers – not the most interesting thing to look at on the *Jeopardy!* stage. See how IBM worked to create a representation of this computing system for the viewing audience – from its stage presence to its voice. [Watch >](#)

## Watson after Jeopardy!

Watson was optimized to tackle a specific challenge: competing against the world's best *Jeopardy!* contestants. [Watch >](#)

IBM Watson: Computer Competes on Jeopardy!

From: IBM | Jan 16, 2011 | 68,620 views

IBM's innovative natural language processing computer known as Watson will compete, man vs machine, on Jeopardy! Watson employs deep data analytics, data mining and algorithms for machine learning. So why Jeopardy?

Visit [ibm.com/watson](http://ibm.com/watson) for more information.

# Trigger-driven Demand Generation

## Watson – A System Designed for Answers. Creating a workload optimized system to play Jeopardy!

Watson was designed to further the science of natural language processing by competing against the most successful Jeopardy! champions. This white paper explains Watson's workload optimized system design based on IBM DeepQA software and POWER7® processor-based servers.

[Download now >](#)

Subject line: IBM: Put a reliable performer at the core of your operation

[Read](#) ▶

Read the Clabby paper to see what a POWER7™ workload optimized system can do for your business.

**\*\*SALUTATION\*\***

An IBM® machine dubbed Watson is battling human contestants on Jeopardy!—the #1 rated quiz show in America. The POWER7 based computing system rivals a human's ability to answer questions posed in natural language with speed, accuracy and confidence.

But Watson is emblematic of so much more.

Watson not only represents an impressive leap forward in workload optimized systems design for analytics, but also shows how the latest generation of IBM Power Systems, featuring the POWER7 processor, can be optimized to run your business.
